1. Introduction

Technology plays an important role in modern businesses today. Many companies use websites to present their services and communicate with customers easily.

Beauty clinics especially benefit from websites because customers can explore treatments, book appointments, and learn about skincare services online.

This project presents a **Beauty Clinic Website** that allows users to view services, book appointments, see treatment results, and purchase skincare products. The system also includes an **Admin Dashboard** that helps the clinic manage appointments, services, and products efficiently.

2. Project Idea

The main idea of this project is to design and develop a modern website for a beauty clinic.

The website allows clients to:

- Explore different beauty treatments
- Book appointments with specialists
- View before and after treatment results
- Purchase skincare products
- Contact the clinic

The system also allows administrators to manage bookings and clinic services through an admin panel.

3. Project Objectives

The main objectives of this project are:

- Create a user-friendly clinic website
- Allow clients to explore available treatments
- Provide an online appointment request system
- Display treatment results using before and after images
- Provide an online skincare product store
- Allow administrators to manage services, bookings, and products

4. SYSTEM FEATURES

The system includes several important features.

▪ **Appointment Booking System**

Users can request an appointment by selecting:

- Service
- Doctor
- Date
- Time

The appointment request is sent to the admin and must be confirmed before it becomes active.

▪ **Before & After Gallery**

The website includes a gallery that shows treatment results using image comparison sliders.

This helps clients see real results from previous treatments.

▪ **Online Product Store**

The website includes a small e-commerce store that sells skincare products such as:

- Vitamin C Serum
- Sunscreen
- Moisturizer
- Face Cleanser

Users can add products to their cart and purchase them online.

▪ **User Accounts**

Users can create accounts and log in to:

- Manage appointments
- View booking history
- Track orders
- Update personal information

5. Website Pages

The website includes several main pages.

▪ **Home Page**

The home page introduces the beauty clinic and highlights key services.

Main elements include:

- Navigation bar
- Hero section with treatment image
- Featured services
- Booking button
- Testimonials
- Product highlights

▪ **Services Page**

This page displays all available treatments.

Each service is displayed as a card including:

Service Name

Duration

Price

▪ **Specialists Page**

This page introduces clinic doctors and specialists.

Each doctor card includes:

Doctor Name

Specialization

Years of Experience

Treatments offered

▪ **Booking Page**

This page allows users to request an appointment.

The user selects:

Service

Doctor

Date

Time

▪ **Before & After Gallery**

This page displays treatment results using comparison sliders.

- **Products Store**

The online store displays skincare products.

Each product card includes:

Product Image

Product Name

Price

Rating

- **Prices Page**

This page displays treatment prices in a simple table.

- **Service Price**

Botox	\$120
Laser	\$50
Facial	\$70

Users can click a button to book an appointment.

- **Contact Page**

This page allows users to contact the clinic.

Contact Form fields:

Name

Email

Message

Button:

Send Message

The page also displays:

Phone Number

Email Address

Clinic Address

Google Map location

6. Booking System Workflow

The booking system works in the following steps.

1. The client selects a service and requests an appointment.
2. The booking request is saved in the database with status:

Pending

3. The admin reviews the request in the dashboard.
4. The admin can:

Approve

Reject

5. If approved, the appointment status becomes:

Confirmed

7. Admin Dashboard

The system includes an admin control panel.

The admin can:

- View booking requests
- Approve or reject appointments
- Manage services
- Manage specialists
- Manage products
- View customer messages

The dashboard also shows statistics such as:

Total bookings

Pending requests

Confirmed appointments

8. Database Design

The system uses a database to store information.

▪ Users Table

Stores user data.

Fields include:

User ID

Name

Email

Password

▪ **Services Table**

Stores clinic services.

Fields include:

Service ID

Service Name

Price

Duration

Description

▪ **Specialists Table**

Stores doctor information.

Fields include:

Doctor ID

Name

Specialization

Experience

▪ **Bookings Table**

Stores appointment requests.

Fields include:

Booking ID

User ID

Service ID

Doctor ID

Date

Time

Status

Status values:

Pending

Confirmed

Rejected

▪ **Products Table**

Stores skincare products.

Fields include:

Product ID

Name

Price

Description

Image

9. Technologies Used

The following technologies are used to build the website.

HTML

CSS

JavaScript

Optional technologies:

Bootstrap

PHP

MySQL

10. User Interface Design

The website uses a modern and elegant UI design suitable for beauty clinics.

Design characteristics include:

- Light Pink , Glassmorphism
- Large treatment images
- Card-based layout
- Clean typography
- Responsive design for mobile devices

The UI includes pages for:

- Home
- Services
- Specialists
- Booking
- Gallery
- Products
- Prices
- Contact
- Admin Dashboard

11. Conclusion

The Beauty Clinic Website provides a complete digital platform for managing beauty clinic services.

The system allows users to explore treatments, request appointments, view treatment results, and purchase skincare products.

The admin dashboard allows clinic staff to manage bookings and services efficiently.

This project demonstrates how web technologies can be used to build a practical and user-friendly healthcare service platform.
